

ACTi Casino & Gaming Surveillance Solutions

Casino & Gaming: Overview

ACTi's end-to-end casino and gaming solutions, incorporating in-house developed cameras with built-in analytics and servers, can detect fraud discreetly and manage the property efficiently. With the integration of digital signage, access control and intercom systems the safety of the casinos can be further enhanced.

The security management related challenges and solution requirements vary from each casino and gaming type. Since the business of casino and gaming always involves great amount of money and fortune, the security challenges such as cheating, embezzlement, conflicts and criminal activities are major problems in casino and gaming.

To detect fraud with discreet solution, ACTi's end-to-end casino and gaming surveillance offers covert cameras with various mounting accessories. Access control, alarm system, intercom and malfunction monitoring can keep an eye on unauthorized access, vandalism and much more. Also, the full solution of VMS helps to maintain hundreds of IP cameras running 24/7 easily and efficiently.

Casino & Gaming: Map

Casino & Gaming: Applications

Unauthorized Access Detection

Detect the intrusion attempts using video analytics and notify the security personnel.

Tailgating Detection

Detect tailgating at the entrance of restricted area by comparing the detected head count with number of presented access credentials.

Real-time Suspect Tracking

Track the suspect seamlessly by switching between video channels using transparent video overlay buttons in video management system.

Vehicle Access Control

The access control at the gate can be done conveniently using ALPR technology.

Intercom Service

Interact with other individuals by local voice-based communication system.

Casino & Gaming: Applications

Human Body Temperature Detection

Detect abnormal human body temperature by using a high accuracy thermal camera together with built-in face detection AI.

Fraud Detection

Detect fraud and scamming by the dishonest players in casinos.

On-the-Go Surveillance

- Monitor the views from surveillance cameras using a mobile device while walking around the premises, to respond to incidents instantly.

Safety Assurance

Ensure safety of people using video surveillance system.

Critical Patient Monitoring

Remotely monitor critical patients using the video surveillance solution.

Casino & Gaming: Applications

Unauthorized Access Detection

Detect the intrusion attempts using video analytics and notify the security personnel.

Without surveillance videos, it is hard to be sure if the identity shown in the entry log matches the accessing person. Access control integrated with the surveillance system can remarkably prevent the crises and loss resulted from unauthorized access.

This is based on the **Face Recognition** analytics in ACTi's Door Stations.

Casino & Gaming: Applications

Tailgating Detection

Detect tailgating at the entrance of restricted area by comparing the detected head count with number of presented access credentials.

Whenever the RFID card is swiped, the system will count the number of the actual entries. When mismatched, the system will create the alarm. This prevents both tailgating and piggybacking.

This is based on the **People Counting** analytics and **RFID** technology. [Read More.](#)

Casino & Gaming: Applications

Real-Time Suspect Tracking

Track the suspect seamlessly by switching between video channels using transparent video overlay buttons in video management system.

Track the suspect using the video management system interface by using the convenient feature of switching the views with 1 click on the video which opens up the next view of the area the suspect is moving towards to. This method works for both live view and playback. By this method it is possible to instantly find out where the suspect is going and dispatch officers to handle the situation immediately.

This is based on the unique **Visual Tracking** feature of ACTi's **NVR 3 and CMS 2**.

Casino & Gaming: Applications

Vehicle Access Control

The access control at the gate can be done conveniently using ALPR technology.

Except for the highest security facilities, most locations can benefit from the automatic gate control without requiring the gate officer to be present all the time. Only the white-listed vehicles can enter the premises. Furthermore, it is possible to set up a blacklist which alerts the security officers instantly when the blacklisted vehicle appears.

This is based on the **ALPR** analytics inside ACTi cameras. [Read More](#).

Casino & Gaming: Applications

Intercom Service

Interact with other individuals by local voice-based communication system.

There will be voice access points as intercoms in various locations across the Casino & Gaming, such as gates and entrances, loading area, parking lot and others. The employees and the visitors can talk to the security staff immediately using that feature.

This is based on the **NVR 3** or **CMS 2** along with intercom devices such as **Q950**.

Human Body Temperature Detection

Detect abnormal human body temperature by using a high accuracy thermal camera together with built-in face detection AI.

To prevent the spread of diseases, there are smart surveillance devices that can detect high body temperature from the distance using specially designed high precision thermal imagers. These cameras will first detect human faces using its deep learning AI and then analyze each face using the thermal image and get the exact temperature reading of the face. The temperature above the threshold will trigger an event.

This is based on the **Temperature Detection** analytics inside ACTi thermal cameras, such as [VMGB-370](#), [VMGB-371](#).

Casino & Gaming: Applications

On-the-Go Surveillance

Monitor the views from surveillance cameras using a mobile device while walking around the premises, in order to respond to incidents instantly.

Universal mobile application designed to remotely access NVR, CMS or camera for video playback and management.

Features: Live view and playback, Search video recordings by events, PTZ Control, Google Maps, Activate Digital Output, Playback from camera's memory card

This is based on the **ACTi Mobile Client**, both for Android and iOS. It is free.

Casino & Gaming: Applications

Safety Assurance

Ensure safety of people using video surveillance system.

ACTi provides surveillance solution for ensuring the safety with both overview and details monitoring. By installing a camera with wide viewing angle at the center or the corner of the store, the whole area can be perfectly covered. Meanwhile, the faces of people entering the premises can be captured by the covert camera discreetly installed into the height strip at the entrance.

For large scale projects, ACTi TV Wall enables multiple views to be displayed on different monitors at the same time. Get the complete overview to improve situational awareness and operational efficiency.

Video Evidence Push to NVR by Mobile Phone

Use the built-in camera of the mobile phone to stream the video evidence of the incident to NVR.

The patrolling security guard can now use his smartphone with ACTi Mobile Client to capture live video and "push" it through wireless network to NVR 3 in real time. Moreover, the recording can be reviewed later during incident investigation using advanced features that apply to surveillance cameras including synchronized playback, bookmarks, timeline search, and more.

This is based on the **ACTi Mobile Client**, both for Android and iOS. It is a free app.

Redundancy Support (N+1, N-to-N)	Yes	Yes
Workstation, Web Client, Mobile Client	Yes	Yes
Display Layouts (maximum grid size)	225	225

Access Control Smart Server

Access Control Smart Server (ACSS) is an easy-to-use access control software for managing **employees and visitors access** through the doors and gates as well as managing **employee attendance**. ([read more](#))

Core Function

Access Control Management

Doors, gates, locks, identification of face*, card, ALPR*, tailgating* detection

Attendance Management

Work shifts, clock-in, clock-out, late, absent

Visitor management

Visitor enrollment for temporary access

Construction site management

Temporary sites management

Food ordering management

Conveniently manage the employee services

Conference room management

Book the available meeting rooms in your company

Customer arrival management

Track when the customers arrive to the appointments

ACTi High Frame Rate Camera Product Line

High Frame Rate is a critical feature of the cameras that is used to detect or investigate fraud in casinos, using at least 60 fps.

ACTi AI Solution Architecture

ACTi Advantages compared to Server-Based AI Providers

- Hundreds of channels with deep learning analytics can be managed by a single VMS server, using just a common server hardware configuration. The Server-based AI solutions have limited number of channels and require very expensive hardware.
- VMS video recording functionality is much better secured when the VMS does not have the burden of running the analytics that may consume the server resource to its limits.
- Faster response to the events – AI cameras can control the other nearby PTZ cameras for instant response, to get better video coverage of the scene. The analyses that are processed on the VMS side will be too slow for proper response.
- Since the AI features are inside the camera, there are no Analytics related licenses required on the server side. Therefore, the cost of VMS in some cases is up to 10 times lower than the server-side AI solutions.

NVR and CMS Features

ACTi NVR 3 Corporate (and CMS 2) manages the analytics events from the cameras as follows:

1. Set up the analytic rules and thresholds – for example, how big is the crowd, how long time is considered loitering.
2. Receive real-time analytic events from all the cameras and respond by the pre-defined actions, such as send e-mail, instant pop-up of the video channel on the VMS screen and more.
3. Automatically push video to the mobile app of the patrolling security guards.
4. Search by the specific filter rules, bookmarks, thumbnails.
