

ACTi

Banking Surveillance Solutions

Banking: Overview

ACTi offers you the end-to-end solutions for maximizing banking security and customer service assurance. With the help of the integration of intelligent video analytics, digital signage, alarm system, intercom and access control, you can keep asset and employee safety, as well as enhance banking efficiency.

Security and business management are always the major challenges in banking. Since transactions with great amount of money happen in banks every day, robbery, theft, embezzlement, and unauthorized access are the major threats of security management. Also, as various banking services are needed and running in banks, the efficiency matters crucially that affects customer flow and banking business. Thus, how to keep asset and employee safe, and how to enhance banking efficiency are the main problems to solve.

ACTi offers you the best end-to-end banking surveillance solution. With ACTi's high resolution IP cameras, every movement can be recorded with clear view. Intelligent video analytics, intercom and integration with alarm system, access control can prevent vandalism, theft and unauthorized access. Digital Signage can help you communicate with customers and employees more effectively and efficiently.

Safety Assurance	Y	Y	Y	Y	Y	Y	Y	Y
Vehicle Access Control	Y							

Banking: Applications

Unauthorized Access Detection

Detect the intrusion attempts using video analytics and notify the security personnel.

Tailgating Detection

Detect tailgating at the entrance of restricted area by comparing the detected head count with number of presented access credentials.

Real-time Suspect Tracking

Track the suspect seamlessly by switching between video channels using transparent video overlay buttons in video management system.

Digital Signage

Show predefined digital content on the public monitors with customized layout, based on predefined schedule or event rules.

Discreet Monitoring

Monitor the visitors without letting them feel they are being monitor.

Banking: Applications

Blacklisted Persons Identification

Identify the blacklisted persons by recognizing their faces automatically.

Suspicious Items Detection

Detect the items that are left unattended to prevent serious security and safety hazards.

On-the-Go Surveillance

Monitor the views from surveillance cameras using a mobile device while walking around the premises, to respond to incidents instantly.

Safety Assurance

Ensure safety of people using video surveillance system.

Vehicle Access Control

The access control at the gate can be done conveniently using ALPR technology.

Banking: Applications

Unauthorized Access Detection

Detect the unauthorized access attempts using the access control system and the video analytics and notify the security personnel.

Without surveillance videos, it is hard to be sure if the identity shown in the entry log matches the accessing person. Access control integrated with the surveillance system can remarkably prevent the crises and loss resulted from unauthorized access.

This is based on the **Face Recognition** analytics in ACTi's Door Stations.

Banking: Applications

Tailgating Detection

Detect tailgating at the entrance of restricted area by comparing the detected head count with number of presented access credentials.

Whenever the RFID card is swiped, the system will count the number of the actual entries. When mismatched, the system will create the alarm. This prevents both tailgating and piggybacking.

This is based on the **People Counting** analytics and **RFID** technology. [Read More.](#)

Banking: Applications

Real-Time Suspect Tracking

Track the suspect seamlessly by switching between video channels using transparent video overlay buttons in video management system.

Track the suspect using the video management system interface by using the convenient feature of switching the views with 1 click on the video which opens up the next view of the area the suspect is moving towards to. This method works for both live view and playback. By this method it is possible to instantly find out where the suspect is going and dispatch officers to handle the situation immediately.

This is based on the unique **Visual Tracking** feature of ACTi's **NVR 3 and CMS 2**.

Banking: Applications

Digital Signage

ACTi provides end-to-end solution for effective and real-time communication. Digital signage is able to display various contents such as pre-recorded video, live video streams, images, text and web pages with customized layout.

The digital signage can be used as:

1. General Advertising
2. Notifications, Reminders, Instructions
3. Surveillance Monitoring, Scam Prevention

For General Advertising, Notifications, Reminders, Instructions, the **cloud-based digital signage** is used. For Theft Prevention, the **ECD-series decoders** are used along with ACTi's VMS solution.

Banking: Applications

Blacklisted Persons Identification

Identify the blacklisted persons by recognizing their faces automatically.

The banks may have a list of individuals who might be a potential risk for the bank. An early notification of the arrival of the blacklisted person helps the staff be prepared for that.

This is based on the **Face Recognition** supported surveillance cameras.

Retail: Applications

Suspicious Items Detection

Detect the items that are left unattended to prevent serious security and safety hazards.

The unattended objects, such as bags, boxes, suitcases or suspicious devices are considered risk items that should be handled quickly. Those objects can sometimes be accidentally forgotten there. Rarely, these items could also pose threats as being malicious. They could disguise explosives or other dangerous substances.

This is based on the **Unattended Object Detection** analytics inside ACTi cameras. [Read More.](#)

Banking: Applications

On-the-Go Surveillance

Monitor the views from surveillance cameras using a mobile device while walking around the premises, in order to respond to incidents instantly.

Universal mobile application designed to remotely access NVR, CMS or camera for video playback and management.

Features: Live view and playback, Search video recordings by events, PTZ Control, Google Maps, Activate Digital Output, Playback from camera's memory card

This is based on the **ACTi Mobile Client**, both for Android and iOS. It is free.

Banking: Applications

Safety Assurance

Ensure safety of people using video surveillance system.

ACTi provides surveillance solution for ensuring the safety with both overview and details monitoring. By installing a camera with wide viewing angle at the center or the corner of the store, the whole area can be perfectly covered. Meanwhile, the faces of people entering the premises can be captured by the covert camera discreetly installed into the height strip at the entrance.

For large scale projects, ACTi TV Wall enables multiple views to be displayed on different monitors at the same time. Get the complete overview to improve situational awareness and operational efficiency.

Vehicle Access Control

The access control at the gate can be done conveniently using ALPR technology.

Except for the highest security facilities, most locations can benefit from the automatic gate control without requiring the gate officer to be present all the time. Only the white-listed vehicles can enter the premises. Furthermore, it is possible to set up a blacklist which alerts the security officers instantly when the blacklisted vehicle appears.

This is based on the **ALPR** analytics inside ACTi cameras. [Read More.](#)

General Surveillance Domes (91x, 7xx, 8xx series)	Y	Y
Surveillance PTZ (95x/96x/97x Series)	Y	Y*

PTZ controls available via NVR interface.

Windows NVR (NVR 3)

NVR 3 is one of the most famous ACTi products – it is a professional and elegant network video recorder platform with wide range of features and extremely reliable performance, available in two editions ([read more](#)).

Feature	NVR 3 Business	NVR 3 Corporate
Maximum Number of Channels	100	200 (Standalone NVR 256)
Free ACTi Camera Channels Included	32	1
Free 3 rd Party Camera Channels Included	1	1
CMS Support	No	Yes
POS, Access Control, Network IO Support	No	Yes
eMap	Yes	Yes
Google Map	No	Yes
Embedded Websites within Display	No	Yes
PTZ Control	Yes	Yes
Redundancy Support (N+1, N-to-N)	Yes	Yes
Workstation, Web Client, Mobile Client	Yes	Yes
Display Layouts (maximum grid size)	225	225

Access Control Smart Server

Access Control Smart Server (ACSS) is an easy-to-use access control software for managing **employees** and **visitors** access through the doors and gates as well as managing **employee attendance**. ([read more](#))

Core Function

Access Control Management

Doors, gates, locks, identification of face*, card, ALPR*, tailgating* detection

Attendance Management

Work shifts, clock-in, clock-out, late, absent

Visitor management

Visitor enrollment for temporary access

Construction site management

Temporary sites management

Food ordering management

Conveniently manage the employee services

Conference room management

Book the available meeting rooms in your company

Customer arrival management

Track when the customers arrive to the appointments

ACTi Deep Learning AI Camera Product Line

Deep learning is a method in artificial intelligence (AI) that teaches computers to process data in a way that is inspired by the human brain. Deep learning models can recognize complex patterns in pictures, text, sounds, and other data to produce accurate insights and predictions.

Model	<u>A426</u>	<u>A826</u>	<u>A952</u>	<u>A956</u>	<u>Q83</u>
Photo					
Type	Zoom Bullet	Zoom Dome	Speed Dome	Speed Dome	Multi-Imager

ACTi AI Solution Architecture

ACTi Advantages compared to Server-Based AI Providers

- Hundreds of channels with deep learning analytics can be managed by a single VMS server, using just a common server hardware configuration. The Server-based AI solutions have limited number of channels and require very expensive hardware.
- VMS video recording functionality is much better secured when the VMS does not have the burden of running the analytics that may consume the server resource to its limits.
- Faster response to the events – AI cameras can control the other nearby PTZ cameras for instant response, to get better video coverage of the scene. The analyses that are processed on the VMS side will be too slow for proper response.
- Since the AI features are inside the camera, there are no Analytics related licenses required on the server side. Therefore, the cost of VMS in some cases is up to 10 times lower than the server-side AI solutions.

NVR and CMS Features

ACTi NVR 3 Corporate (and CMS 2) manages the analytics events from the cameras as follows:

1. Set up the analytic rules and thresholds – for example, how big is the crowd, how long time is considered loitering.
2. Receive real-time analytic events from all the cameras and respond by the pre-defined actions, such as send e-mail, instant pop-up of the video channel on the VMS screen and more.
3. Automatically push video to the mobile app of the patrolling security guards.
4. Search by the specific filter rules, bookmarks, thumbnails.
